US Banks

AI in financials: Bracing for the disruption ahead

Industry Overview

AI agents turn up the pressure...

Our view coming out of our panel discussion "AI in Financials" with various industry experts and management meetings during BofA's 34th annual financial services conference is that incumbents in the financial services space are at a greater risk of being disrupted by competitors who have adopted AI tools and using it effectively as opposed to being disrupted by a new AI tool. There will likely be a price to be paid for incumbents who do not move. **See page 2 for panel takeaways.** Relevant research: US Banks: AI will eat software

...but banking is more than just software codes

We believe the stickiness of client relationships "human interaction" that demands high-touch service across capital markets/commercial banking/wealth combined with regulatory requirements raise the barrier to entry. Adapting to a changing technology landscape is part of the DNA for the industry given the persistent competitive threats from Fintechs (online banking, robo-advisory, payments). That said, AI could enable Fintechs to compete more effectively by offering sophisticated services at lower cost.

Every minute matters

The AI industry is moving at an extraordinary pace, with panelists noting that a year in AI now feels like a decade of progress with model capabilities jumping materially every few months. This speed creates real obsolescence risk, as infrastructure or agentic systems built today may be overtaken by the next model release. At the same time, banks benefit from a structural regulatory moat which may make it difficult for new entrants to compete at scale.

A new era of efficiency

Banks are in a period of meaningful cost structure transformation, with the most immediate gains expected in manual back and middle office workflows, especially if well-defined and/or offshored (i.e., KYC/AML, fraud detection, etc). AI tools such as Anthropic's Claude have real potential to automate large volumes of work, eventually offering a path to lower run rate expenses and improved efficiency. We believe this could emerge as a key differentiator for banks, with early adopters able to translate efficiency gains into better operating leverage and more capacity to reinvest for growth.

AI investment bubble "a feature, not a bug"

Panelists agreed that while parts of the AI market were showing classic bubble traits, any correction is unlikely to derail the structural transformation underway. The bubble was framed as "a feature, not a bug," arguing that even with a valuation reset, the underlying AI infrastructure retains durable value. Hype is clearly mounting with AI companies raising $500mn+ with just an idea, but panelists noted that start-up shakeouts often push the industry forward.

Glossary:

AI: Artificial Intelligence

AML: Anti-Money Laundering

APIs: Application Programming Interfaces

KYC: Know Your Customer

SaaS: Software as a Service

BofA Securities does and seeks to do business with issuers covered in its research reports. As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision.
Refer to important disclosures on page 5 to 7.

AI in Financials Panel

Ed Sim (Founder & Partner, Boldstart Ventures), Peter Yared (Founder & CEO, InCountry), Julian Levy (Managing Partner & Co-Founder, Elevata Ventures)

Agent-native companies vs. legacy structures

- Panelists noted that startups founded in the last two years are "agent-native," building products and internal workflows around AI agents from the start, which produces leaner cost structures and faster iteration.
- Companies founded before this era face cultural and architectural friction inserting agents into older systems, widening the gap between legacy and modern firms.
- Lower barriers to entry are allowing founders to attack every layer of the stack, though many layers built just 18 months ago are already being commoditized as out of the box agent capabilities advance.

Regulation, data residency, and compliance shaping product design

- Regulatory and compliance requirements now influence product design at the earliest stages.
- Data minimization, jurisdictional constraints, and fragmented global rules require institutions to rethink how data flows to agents.
- Some countries require data to remain local, forcing banks to replicate infrastructure or tightly restrict what information is sent to each workflow.
- Browser-based AI tools also create new security risks by bypassing enterprise controls.

Enterprise adoption accelerating faster than prior tech cycles

- Panelists agreed that AI is being adopted inside financial institutions much faster than cloud technology was.
- The earliest deployments are concentrated in back-office functions such as KYC, accounting, document handling, and exception review.
- Customer facing use cases are expected to follow once governance, auditability, and hallucination controls mature enough to satisfy regulators.

Coding as the leading indicator of enterprise transformation

- Panelists highlighted that coding agents best illustrate how quickly AI-driven change is accelerating.
- Multi-agent coding systems can now autonomously complete complex workflows rather than merely assist with autocomplete.
- Developers are using these agents to rebuild decade old systems in a matter of weeks, shifting constraints from coding to integration and governance. Institutions relying on outdated models or free tiers are already falling behind peers using the latest agentic tools.

Reliability improving and enabling phased automation

- Hallucinations, once the main blocker, have become less problematic due to improved model stability, sandboxing, and tighter retrieval scopes.

- Panelists expect many processes to operate in parallel with agent systems during early rollout, particularly those involving multi team handoffs or high risk decision flows.
- Some institutions may test fully automated "greenfield" workflows before integrating them back into tightly regulated environments.

Platform dynamics: distribution, trust, and integration advantages

- Panelists observed that while frontier model quality shifts frequently, enterprise adoption depends far more on distribution, permissioning, and trust.
- Platforms with strong identity management, productivity suite distribution, and enterprise grade controls (such as agent-chaining permissions and role-based access) are positioned to benefit most in the near term.
- Over time, institutions are expected to blend frontier APIs, open-source models, and internal models, with data-control strategy becoming a major factor in vendor choice.

SaaS pressure and the rise of internal build

- Panelists agreed that traditional SaaS models are exposed as internal teams increasingly use AI to recreate workflows once outsourced to software providers.
- Infrastructure centric vendors appear more durable, while workflow focused SaaS offerings may face greater pressure.
- Large incumbents with deeply embedded rules and multi-year contracts retain short-term protection, but agentic systems may eventually extract and replicate their workflows. Renewal negotiations may involve fewer seats, higher per-seat fees, shorter contracts, and demands for AI-related flexibility.

Labor displacement and early automation candidates

- Panelists identified highly structured offshore processes and standardized review work as the earliest and most economically attractive areas for automation.
- The economic value of proprietary enterprise data is increasing sharply as model providers search for differentiated training sources.
- Many institutions are already running shadow-mode agents to map workflows and pinpoint automation opportunities.

Macro cycle, capex intensity, and bubble dynamics

- The panel acknowledged bubble-like behavior in certain private valuations, though they believe the productivity impact of AI remains genuine and broad based.
- Even if a correction occurs, underlying assets such as power, data centers, and hardened pipelines will likely retain long term value.
- Rapid hardware cycles and power constraints introduce new risks, especially the possibility of stranded infrastructure that cannot be easily repurposed unlike the "dark fiber" salvageable after the dot-com crash.

Competitive implications across bank sizes

- Large financial institutions currently lead due to scale, vendor attention, and internal technical talent.

- Mid-tier banks, meanwhile, remain underserved by the leading platforms and major consulting firms, leaving them with fewer support options. However, panelists believe mid-tier banks that adopt AI early, particularly in KYC, onboarding, and operational bottlenecks, could narrow the competitive gap. AI-driven migration tools are expected to dramatically reduce the time and cost required to switch core systems or move from on-premise to cloud.

- Regulatory approval, not engineering, remains the largest bottleneck for rapid modernization.

Closing perspectives

- Panelists expect AI to reshape internal processes first before moving into customer facing products, with a speed unmatched by previous technology shifts.

- Competitive advantage will increasingly depend on mastery of data governance, agent orchestration, and rapid integration.

- Institutions that build hands-on expertise now, rather than waiting for “mature enterprise guidelines,” will be best positioned as agentic systems reshape the structure and economics of financial services.

Disclosures

Important Disclosures

FUNDAMENTAL EQUITY OPINION KEY: Opinions include a Volatility Risk Rating, an Investment Rating and an Income Rating. VOLATILITY RISK RATINGS, indicators of potential price fluctuation, are: A - Low, B - Medium and C - High. INVESTMENT RATINGS reflect the analyst's assessment of both a stock's absolute total return potential as well as its attractiveness for investment relative to other stocks within its Coverage Cluster (defined below). Our investment ratings are: 1 - Buy stocks are expected to have a total return of at least 10% and are the most attractive stocks in the coverage cluster; 2 - Neutral stocks are expected to remain flat or increase in value and are less attractive than Buy rated stocks and 3 - Underperform stocks are the least attractive stocks in a coverage cluster. An investment rating of 6 (No Rating) indicates that a stock is no longer trading on the basis of fundamentals. Analysts assign investment ratings considering, among other things, the 0-12 month total return expectation for a stock and the firm's guidelines for ratings dispersions (shown in the table below). The current price objective for a stock should be referenced to better understand the total return expectation at any given time. The price objective reflects the analyst's view of the potential price appreciation (depreciation).

Investment rating	Total return expectation (within 12-month period of date of initial rating)	Ratings dispersion guidelines for coverage cluster[R1]
Buy	≥ 10%	≤ 70%
Neutral	≥ 0%	≤ 30%
Underperform	N/A	≥ 20%

[R1]Ratings dispersions may vary from time to time where BofA Global Research believes it better reflects the investment prospects of stocks in a Coverage Cluster.

INCOME RATINGS, indicators of potential cash dividends, are: 7 - same/higher (dividend considered to be secure), 8 - same/lower (dividend not considered to be secure) and 9 - pays no cash dividend. *Coverage Cluster* is comprised of stocks covered by a single analyst or two or more analysts sharing a common industry, sector, region or other classification(s). A stock's coverage cluster is included in the most recent BofA Global Research report referencing the stock.

BofA Global Research personnel (including the analyst(s) responsible for this report) receive compensation based upon, among other factors, the overall profitability of Bank of America Corporation, including profits derived from investment banking. The analyst(s) responsible for this report may also receive compensation based upon, among other factors, the overall profitability of the Bank's sales and trading businesses relating to the class of securities or financial instruments for which such analyst is responsible.

Other Important Disclosures

From time to time research analysts conduct site visits of covered issuers. BofA Global Research policies prohibit research analysts from accepting payment or reimbursement for travel expenses from the issuer for such visits.
Prices are indicative and for information purposes only. Except as otherwise stated in the report, for any recommendation in relation to an equity security, the price referenced is the publicly traded price of the security as of close of business on the day prior to the date of the report or, if the report is published during intraday trading, the price referenced is indicative of the traded price as of the date and time of the report and in relation to a debt security (including equity preferred and CDS), prices are indicative as of the date and time of the report and are from various sources including BofA Securities trading desks.
The date and time of completion of the production of any recommendation in this report shall be the date and time of dissemination of this report as recorded in the report timestamp.

Recipients who are not institutional investors or market professionals should seek the advice of their independent financial advisor before considering information in this report in connection with any investment decision, or for a necessary explanation of its contents.
Officers of BofAS or one or more of its affiliates (other than research analysts) may have a financial interest in securities of the issuer(s) or in related investments.

General Investment Related Disclosures:

Taiwan Readers: Neither the information nor any opinion expressed herein constitutes an offer or a solicitation of an offer to transact in any securities or other financial instrument. No part of this report may be used or reproduced or quoted in any manner whatsoever in Taiwan by the press or any other person without the express written consent of BofA Securities.

This document provides general information only, and has been prepared for, and is intended for general distribution to, BofA Securities clients. Neither the information nor any opinion expressed constitutes an offer or an invitation to make an offer, to buy or sell any securities or other financial instrument or any derivative related to such securities or instruments (e.g., options, futures, warrants, and contracts for differences). This document is not intended to provide personal investment advice and it does not take into account the specific investment objectives, financial situation and the particular needs of, and is not directed to, any specific person(s). This document and its content do not constitute, and should not be considered to constitute, investment advice for purposes of ERISA, the US tax code, the Investment Advisers Act or otherwise. Investors should seek financial advice regarding the appropriateness of investing in financial instruments and implementing investment strategies discussed or recommended in this document and should understand that statements regarding future prospects may not be realized. Any decision to purchase or subscribe for securities in any offering must be based solely on existing public information on such security or the information in the prospectus or other offering document issued in connection with such offering, and not on this document.

Securities and other financial instruments referred to herein, or recommended, offered or sold by BofA Securities, are not insured by the Federal Deposit Insurance Corporation and are not deposits or other obligations of any insured depository institution (including, Bank of America, N.A.). Investments in general and, derivatives, in particular, involve numerous risks, including, among others, market risk, counterparty default risk and liquidity risk. No security, financial instrument or derivative is suitable for all investors. Digital assets are extremely speculative, volatile and are largely unregulated. In some cases, securities and other financial instruments may be difficult to value or sell and reliable information about the value or risks related to the security or financial instrument may be difficult to obtain. Investors should note that income from such securities and other financial instruments, if any, may fluctuate and that price or value of such securities and instruments may rise or fall and, in some cases, investors may lose their entire principal investment. Past performance is not necessarily a guide to future performance. Levels and basis for taxation may change.

This report may contain a short-term trading idea or recommendation, which highlights a specific near-term catalyst or event impacting the issuer or the market that is anticipated to have a short-term price impact on the equity securities of the issuer. Short-term trading ideas and recommendations are different from and do not affect a stock's fundamental equity rating, which reflects both a longer term total return expectation and attractiveness for investment relative to other stocks within its Coverage Cluster. Short-term trading ideas and recommendations may be more or less positive than a stock's fundamental equity rating.

BofA Securities is aware that the implementation of the ideas expressed in this report may depend upon an investor's ability to "short" securities or other financial instruments and that such action may be limited by regulations prohibiting or restricting "shortselling" in many jurisdictions. Investors are urged to seek advice regarding the applicability of such regulations prior to executing any short idea contained in this report.

Foreign currency rates of exchange may adversely affect the value, price or income of any security or financial instrument mentioned herein. Investors in such securities and instruments, including ADRs, effectively assume currency risk.

BofAS or one of its affiliates is a regular issuer of traded financial instruments linked to securities that may have been recommended in this report. BofAS or one of its affiliates may, at any time, hold a trading position (long or short) in the securities and financial instruments discussed in this report.

BofA Securities, through business units other than BofA Global Research, may have issued and may in the future issue trading ideas or recommendations that are inconsistent with, and reach different conclusions from, the information presented herein. Such ideas or recommendations may reflect different time frames, assumptions, views and analytical methods of the persons who prepared them, and BofA Securities is under no obligation to ensure that such other trading ideas or recommendations are brought to the attention of any recipient of this information.

In the event that the recipient received this information pursuant to a contract between the recipient and BofAS for the provision of research services for a separate fee, and in connection therewith BofAS may be deemed to be acting as an investment adviser, such status relates, if at all, solely to the person with whom BofAS has contracted directly and does not extend beyond the delivery of this report (unless otherwise agreed specifically in writing by BofAS). If such recipient uses the services of BofAS in connection with the sale or purchase of a security referred to herein, BofAS may act as principal for its own account or as agent for another person. BofAS is and continues to act solely as a broker-dealer in connection with the execution of any transactions, including transactions in any securities referred to herein.
